

Dear community,

I am **Graciela Rojas, President and Founder** of **Movimiento STEM+**.

At **Movimiento STEM+** we work to create a **just and inclusive society**. As a civil association, and the highest representative body of the **STEM+ Ecosystem**, we believe in **systemic change**, cross-sector **collaboration** to generate **high-impact projects, intersectionality** and people's **agency**.

Our initiative has been endorsed by **UNESCO** and **STEM Learning Ecosystems**.

We recognize the importance of **studying STEM disciplinary fields**, providing **vocational guidance** and developing **socio-emotional skills**. We celebrate the **transversality** proposed by **STEM**, its capacity to contribute to **human flourishing, project-based learning** and promote the interaction with other areas of knowledge (STEM+).

As you know, annually, we generate relevant research, which is why we have evidence of the **transformative power** of **STEM Education**, to care for the planet, develop talent, close gaps and generate innovation in increasingly complex and technological environments. We strive for substantive equality, paying special attention to **women at all stages of their trajectories, starting with girls**, whom we **encourage to discover their power and leadership**.

We want the **key players** who make this Education a reality to share and implement **this vision in every corner, in every intervention**. To achieve this, we **align programs with this approach**, trigger **high-level dialogue**, generate **strategic links** and **promote the quality** of STEM Education.

We thank our allies, friends, collaborators and those who have believed in this great dream. Their commitment to **STEM Education** will forge **invincible talent** ready to face the challenges of this century.

We are confident that only **through collaboration** can we achieve beyond what is imagined. I invite you to believe that:

**With STEM Education, the impossible becomes possible!**

Sincerely,

Graciela Rojas  
Founder and President  
Movimiento STEM+
